Report Overview

The global interventional cardiology and peripheral vascular device market comprises medical devices used to diagnose and treat cardiovascular and peripheral vascular diseases through minimally invasive procedures. These devices include stents (drug-eluting, bare-metal, and bioresorbable), catheters (angiography, guiding, and balloon), guidewires, atherectomy systems, embolic protection devices, and vascular closure devices, among others. The market is driven by the rising prevalence of cardiovascular diseases (CVDs) such as coronary artery disease, peripheral artery disease, and structural heart conditions, fueled by aging populations, sedentary lifestyles, and increasing risk factors like diabetes and hypertension. Technological advancements, such as bioabsorbable stents and robotic-assisted interventions, along with growing demand for minimally invasive procedures due to shorter recovery times and reduced complications, further propel market growth. However, high costs of devices, stringent regulatory approvals, and reimbursement challenges in emerging markets pose restraints. North America dominates due to advanced healthcare infrastructure and high procedural volumes, while Asia-Pacific is the fastest-growing region, driven by improving healthcare access and rising CVD burden. Key players include Medtronic, Abbott Laboratories, Boston Scientific, and Johnson & Johnson, who focus on innovation and strategic acquisitions to strengthen market position.

The global Interventional Cardiology and Peripheral Vascular Device market size was estimated at USD 22159.83 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.13% during the forecast period.
