Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Interventional Valve competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global interventional valve production reached approximately 87 K units, with an average global market price of around US\$ 25,185 per unit. Interventional valves refer to heart valve devices used in minimally invasive procedures to treat heart valve disease. These valves are typically inserted through a catheter rather than requiring open-heart surgery, as seen in procedures like Transcatheter Aortic Valve Replacement (TAVR). Interventional valves are typically bioprosthetic valves made from materials such as bovine pericardium or porcine tissue. Market Overview:
