## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Intervertebral Disc Endoscopy competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, disc endoscope production reached 22,420 units, with an average selling price of US\$23,512 per unit. The annual production capacity of a single disc endoscope line is approximately 2,000 units, with a gross profit margin of approximately 61.25%. A disc endoscope is a medical device used for minimally invasive spinal surgery and a type of spinal endoscope. It inserts the endoscope and accompanying instruments through a small incision near the intervertebral foramen or between vertebral lamina, enabling direct observation and treatment of spinal conditions such as herniated discs and spinal stenosis. Its core components include a tubular channel equipped with a light source, a high-definition imaging system, surgical instruments, and image processing equipment. These enable precise, direct visual removal of herniated disc tissue, nerve root decompression, and repair of damaged annuli. This technology offers advantages such as minimal trauma, minimal bleeding, rapid recovery, and few complications, making it a key minimally invasive technique in modern spinal surgery. The upstream raw materials for disc endoscopes include optical glass, metal, and plastic, among other basic materials. The quality of these materials directly impacts the endoscope's optical performance, mechanical strength, and durability. The midstream is the intervertebral disc endoscope manufacturers, and the downstream is mainly medical institutions such as hospitals and clinics. Demand for intervertebral disc endoscopes has gradually increased in recent years, but market size has fluctuated slightly due to reliance on imports and falling prices. With the increasing incidence of spinal diseases and the widespread adoption of minimally invasive techniques, market demand is on the rise. Currently, the market is dominated by

imported brands, such as Germany's Joimax, which occupy the high-end market with high technological maturity and brand recognition. Domestic products are becoming more competitive in the mid- and low-end markets, and the localization rate is gradually increasing. The intervertebral disc endoscope market is in a period of steady development, and domestic companies are accelerating their catch-up. Driven by technological innovation and domestic substitution, the market is expected to grow further in the future.

The global Intervertebral Disc Endoscopy market size was estimated at USD 527.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.40% during the forecast period.
