Report Overview:

Intra-Aortic Balloon Pump, or IABP for short, is a mechanically assisted circulatory device that is currently widely used in clinical practice. A catheter with a balloon is implanted in the arterial system to the distal end of the left subclavian artery opening in the descending aorta. The filling, expansion and emptying corresponding to the cardiac cycle can cause the blood to undergo phasic changes in the aorta, thereby playing the role of mechanically assisting the circulation of a cardiac catheter treatment method. It can reduce aortic impedance, increase aortic diastolic pressure, reduce myocardial oxygen consumption, increase oxygen supply, and achieve the purpose of improving heart function.

The Global Intra-Aortic Balloon Pumps Market Size was estimated at USD 361.54 million in 2023 and is projected to reach USD 411.96 million by 2029, exhibiting a CAGR of 2.20% during the forecast period.
