Abstracts

An in-ear ANC headset is a type of earphone that fits inside the ear canal and is equipped with Active Noise Cancellation (ANC) technology. The design involves ear tips that are inserted directly into the ear canal, creating a seal that helps block out some external noise, providing passive noise isolation. This technology uses microphones to pick up surrounding ambient noise. The headset then produces sound waves that are the inverse of the noise, effectively canceling it out and reducing the overall sound that reaches your ears.

The global Intraaural ANC Headset market size was estimated at USD 3284.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 15.20% during the forecast period.
