The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Intraoral Optical Scanner competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. An intraoral optical scanner is a digital dental device that captures three-dimensional images of intraoral structures?such as teeth, gums, and bite relationships?using non-contact optical technologies like structured light, laser, or infrared scanning. The data collected is processed in real time to generate accurate digital models for use in restorative dentistry, orthodontics, implant planning, and chairside CAD/CAM workflows.
