### Report Overview:

Hypothermia, a drop in body temperature, below 35 °C, can be caused due to accidental exposure, medical conditions, or could be on purpose as a part of therapy i.e., induced hypothermia. During vascular surgeries, Induced hypothermia is used for neurological protection, but a patient cannot deviate from normal body temperature for a longer time without risks. Thus, rewarming of patients is crucial. Intravascular warming systems are used to maintain normothermia i.e., normal body temperature which can lead to faster recovery.
