Abstracts

Intrusion alarm systems are electronic security devices designed to detect unauthorized entry into a protected area?such as a building, room, or perimeter?and trigger an audible or visual alarm to alert property owners, security personnel, or monitoring centers. These systems typically consist of sensors (e.g., motion detectors, door/window contacts, glass-break sensors), a central control panel that processes signals, and notification devices like sirens or strobe lights; they may also integrate with broader security ecosystems, including surveillance cameras, access control systems, and remote monitoring services via cellular, internet, or traditional phone lines. Modern systems often feature smart capabilities, such as mobile app integration, real-time alerts, and automation with other IoT devices, enhancing both responsiveness and user convenience while addressing evolving security threats in residential, commercial, industrial, and institutional settings.
