Report Overview:

An inventory tag system consists of wireless computer, barcode scanner, industrial PC, barcode printer and a software. These systems are used to manage the complete lifecycle of particular product, track their location for ensuring that assets are not missing or stolen. A tag is a label attached to a product for providing identification details of the products. Every product offered to the consumers comes with a unique tag. The inventory tag is also used to identify the variety of a product. An inventory tracking system aids in purchasing process, forecasting the sales and preventing theft from employees or customers. In line with this, efficient management of the inventory is a key factor to reduce the demand-supply gap and minimize losing out on customers. Efficient management of inventory further reduces the transportation costs and uneconomical overstock.

Efforts towards standardization, rapid industrialization across the globe, stringent regulations towards packaging by the regulatory bodies, assurance to consumers about the product, increase in security measures against theft are the major factors that drive the growth of the market. However, lack of knowledge about the technology and dearth of skilled workers restrain the market growth.
