Report Overview

An intraocular lens (or IOL) is a tiny, artificial lens for the eye. It replaces the eye's natural lens that is removed during cataract surgery. IOLs come in different focusing powers, just like prescription eyeglasses or contact lenses. Most IOLs are made of silicone, acrylic, or other plastic compositions. They are also coated with a special material to help protect your eyes from the sun's harmful ultraviolet (UV) rays. An ophthalmologist measures the length of eye and the curve of cornea to set the focusing power of the IOLs.

The global IOL Technologies market size was estimated at USD 4250 million in 2023 and is projected to reach USD 6940.08 million by 2032, exhibiting a CAGR of 5.60% during the forecast period.
