## Abstracts

Ion beam cutting machine is an advanced material processing equipment. Ion beam cutting machine uses ion beam to cut materials. The ion generator generates the required ion beam, accelerates the ions to a high energy state through an accelerator, and focuses them on a small size of micron level, so that the energy density reaches an extremely high level. The high energy density ion beam acts on the surface of the material to achieve cutting of the material. Ion beam cutting machines are widely used in cutting, engraving, punching and other fields of metals, plastics, ceramics and other materials. Especially in the field of precision machining, the application of ion beam cutting machines in the processing of electronic components, optical glass, crystal materials, etc. is increasingly valued. As a high-tech metal material processing equipment, ion beam cutting machine has broad application prospects in many fields. Ion beam technology has made great technological innovation and progress in ion source, focusing system and control system. New ion source and focusing system can improve the quality and power density of ion beam, thereby improving the processing effect. The improvement of control system makes ion beam technology more intelligent, automated and efficient. In addition, ion beam cutting machine has broad application prospects in various fields such as metal processing, construction, new energy, shipbuilding and customized processing. Especially in the metal processing industry, plasma cutting machine can be used for cutting and processing of metal materials such as steel, aluminum alloy, copper, etc., and is widely used in automobile manufacturing, aerospace, machinery manufacturing and other industries. In summary, the ion beam cutting machine market currently shows a good trend of continuous expansion of market scale.

The global Ion Beam Cutting Machine market size was estimated at USD 1405.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.10%

during the forecast period.
