Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Ion Exchange Granular Resin competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Ion Exchange Granular Resin production reached approximately 3.40 million tons, with an average global market price of around US\$ 720 per ton. Ion Exchange Granular Resin refers to a type of insoluble, cross-linked polymeric material with a granular form (typically ranging in particle size from 0.3 to 1.2 mm). It possesses a three-dimensional network structure with fixed ionic groups (such as sulfonic acid groups, carboxyl groups, quaternary ammonium groups) and mobile counter-ions (like H⁺, Na⁺, OH⁻, Cl⁻) within its matrix. When in contact with an electrolyte solution, the resin can selectively exchange its mobile counter-ions with ions of the same charge in the solution, based on factors including ionic charge, ionic radius, and concentration. This reversible exchange process enables the resin to perform functions such as water purification, metal ion recovery, solution deionization, and chemical separation, and it can be regenerated and reused after losing its exchange capacity.

The global Ion Exchange Granular Resin market size was estimated at USD 2450.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
