Report Overview

Ion Exchange Polymer is an insoluble matrix (or support structure) normally in the form of small (0.5-1 mm diameter) beads, usually white or yellowish, fabricated from an organic polymer substrate. The beads are typically porous, providing a high surface area. The trapping of ions occurs with concomitant releasing of other ions; thus the process is called ion-exchange.

The APAC region is the largest market for ion exchange polymer, globally. The growth of the APAC ion exchange polymer market can be attributed to the large industrial base in the region and increased demand for ion exchange polymer from the chemical and power industries of the region. In addition, several initiatives undertaken by governments of different countries of the region to attract investments from various international companies are also expected to propel the growth of the APAC ion exchange polymer market during the forecast period.
