## Abstracts

An Ionized Air Gun is a hand-held device used to eliminate static, dust, and contaminants from a variety of surfaces and parts. It is shaped similarly to a gun and includes a trigger. The emitter is made from titanium that resists corrosion, ensuring the blow-off gun will last. Guns can actually operate for several years if used with a filtered gas supply. Replacing the tip can be done in a matter of seconds and you do not have to disassemble the gun to do it. There is also an optional inline capsule filter which ensures that the incoming feed gas is pure.

The global Ionized Air Guns market size was estimated at USD 72.4 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
