Abstracts

IoT-Assisted Crop Monitoring refers to the process of using Internet of Things (IoT) technology to monitor and manage the growth conditions of crops in real-time. Such systems typically include sensors, cameras, drones, and other devices that collect environmental parameters (e.g., soil moisture, temperature, light intensity, air quality) and crop growth data. The data is transmitted to the cloud or local servers for analysis and processing. Farmers or managers can remotely monitor crop conditions via smartphones or computers, allowing them to adjust irrigation, fertilization, and other agricultural practices promptly to enhance crop yield and quality while reducing resource waste.

The global IoT-Assisted Crop Monitoring market size was estimated at USD 2640.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 14.10% during the forecast period.
