## Abstracts

An IoT-based aquaculture system is a smart farming solution that integrates Internet of Things (IoT) technologies to monitor and manage aquatic farming environments in real time. It uses connected sensors and devices to collect data on key parameters such as water temperature, pH, dissolved oxygen, turbidity, ammonia levels, and fish activity. This data is transmitted to cloud-based platforms or local control systems, enabling automated adjustments (e.g., aeration, feeding, water exchange) and early warnings of harmful conditions. The system improves productivity, reduces manual labor, and enhances sustainability and disease prevention in fish, shrimp, or shellfish farming operations.

The global IoT-Based Aquaculture System market size was estimated at USD 185.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
