Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on IoT eSIM Card competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. An IoT eSIM card (embedded SIM) is a programmable, remotely provisioned SIM card designed specifically for Internet of Things (IoT) devices. Unlike traditional physical SIM cards, the eSIM is soldered directly onto the device's motherboard and allows over-the-air updates and management of mobile network profiles. This enables global connectivity without manual SIM replacement, enhances security, and supports device miniaturization and scalability. IoT eSIMs are widely used in applications such as smart meters, connected vehicles, industrial sensors, and wearable devices, offering flexibility and efficiency for large-scale IoT deployments. In 2024, the shipment volume of eSIM ICs will be about 500 million pieces, with an average price of US\$2 per piece.

The global IoT eSIM Card market size was estimated at USD 965.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.70% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global IoT eSIM Card market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
