Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on IoT eSIM IC competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. An IoT eSIM IC (Embedded Subscriber Identity Module Integrated Circuit) is a compact, programmable chip embedded into IoT devices that enables remote provisioning and secure mobile network authentication without needing a physical SIM card. Unlike traditional SIMs, eSIM ICs can switch between mobile network operators over-the-air (OTA), enhancing flexibility and reducing the need for manual replacement in large-scale or hard-to-reach deployments. This technology is especially valuable in IoT applications such as smart meters, industrial sensors, connected vehicles, and wearables, where reliability, longevity, and remote management are critical.

The global IoT eSIM IC market size was estimated at USD 965.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.70% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global IoT eSIM IC market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
