Abstracts

IoT eSIM technology refers to an embedded SIM (Subscriber Identity Module) designed specifically for Internet of Things (IoT) devices, enabling secure, remote provisioning and management of mobile network profiles without the need to physically swap SIM cards. Unlike traditional SIM cards, eSIMs are soldered directly onto a device's hardware and comply with GSMA standards, allowing devices to switch carriers over-the-air (OTA) and maintain connectivity across different geographies and network operators. This technology enhances scalability, simplifies global deployment, and supports use cases such as smart meters, connected cars, industrial sensors, and wearable devices that require long-term, reliable mobile connectivity.

The global IoT eSIM Technology market size was estimated at USD 5850.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global IoT eSIM Technology market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
