Abstracts

The IoT Hotel Automation System, centered on IoT technology, utilizes intelligent gateways, sensor networks, and a cloud platform to provide a comprehensive solution for centralized monitoring and intelligent management of hotel facilities, environments, and services. The system uses smart devices deployed in guest rooms, corridors, and public areas to collect real-time environmental data, device status, and guest behavior information, transmitting this information to the cloud platform via Wi-Fi, Zigbee, or LoRa protocols. The platform analyzes this data to automatically adjust air conditioning temperature, control lighting settings, manage energy consumption, and provide real-time updates on room status, coordinated security alerts, and remote diagnosis of equipment failures. Its core value lies in enhancing the guest experience (e.g., seamless check-in and personalized environmental adjustments), reducing hotel operating costs, and optimizing service processes through data-driven decision-making, ultimately achieving digital and intelligent transformation and upgrades for hotels.

The global IoT Hotel Automation System market size was estimated at USD 158.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
