Report Overview

IoT RFID labels are labels with additional human readable information printed on them. An RFID label is a small device consisting of a circuit, an antenna, sometimes an internal power source, and a protective casing. RFID labels are typically used in inventory management and tracking, whether it to be for locating assets within a building, preventing retail theft, or reducing manual work to manage and document inventories. The sticker or label is printed on one side of the tag, possibly showing a barcode, text, company logo, serial number, or other such visible information. An RFID label printer is used to print this human readable information onto the label, and also sometimes program the tag with information. RFID label printer software is used to customize the label and program the tag.
