Abstracts

An IoT smart inductive proximity sensor is a non-contact electronic proximity sensor. It is used for positioning and detection of metal objects. The sensing range of an inductive switch is dependent on the type of metal being detected. Ferrous metals, such as iron and steel, allow for a longer sensing range, while nonferrous metals, such as aluminum and copper, may reduce the sensing range by up to 60 percent. Inductive proximity sensors are best for detecting ferrous metals, especially steel thicker than 1 mm. These sensors put out a magnetic field that is disturbed by the metal, which alerts the sensor to the metal's presence. Since the presence of any metal, including metal the sensor is embedded in, will affect the sensor, there are shielded inductive sensors which introduce metal to the field in a predictable way. This allows the sensor to detect irregularities in the field when new pieces of metal pass by it, although it also limits the sensor's range. Unshielded sensors have a longer range but are unable to be mounted on or near ferrous metal. According to our research, the number of global connected IoT devices was about 14 billion, grew by 18% compared to 2021. The data released by the Office of the Central Cyberspace Affairs Commission shows that, by the end of 2022, China has built and opened a total of 2.3 million 5G base stations. 110 cities across the country have reached the gigabit city construction standards. Gigabit optical network has the ability to cover more than 500 million households. IPv6 scale deployment application is deeply promoted. The number of active users exceeds 700 million, mobile network IPv6 traffic accounted for nearly 50%. The total size of China's data center racks exceeds 6.5 million standard racks, with an average annual growth rate of more than 30% in the past five years.

The global IoT Smart Inductive Proximity Sensors market size was estimated at USD 3897.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.30% during the forecast period.
