### Report Overview

IoT smart magnetic proximity sensors work in longer ranges than inductive sensors, and can detect magnets through non-ferrous metals, plastic, and wood, making them useful in clean in place systems and for tracking cleaning devices inside pipes. These sensors contain a hermetically sealed reed switch that detects nearby magnets. The reed contacts, when in the presence of a magnet, flex and touch each other to create an electrical contact, thus alerting the system of the presence of a magnet.
