## Abstracts

IoT smart pressure sensors are used in a variety of industrial applications and fields and are also known as pressure transducers or transmitters, depending on the signal they produce. They work by measuring pressure through a flexible component, then converting the amount of flex into an electrical signal that can be quantified. Pressure measurement devices are designed to function based on a system's size and complexity, and reflect the different forms of pressure readings that can be collected, including absolute, gauge, and differential pressure. According to our research, the number of global connected IoT devices was about 14 billion, grew by 18% compared to 2021. The data released by the Office of the Central Cyberspace Affairs Commission shows that, by the end of 2022, China has built and opened a total of 2.3 million 5G base stations. 110 cities across the country have reached the gigabit city construction standards. Gigabit optical network has the ability to cover more than 500 million households. IPv6 scale deployment application is deeply promoted. The number of active users exceeds 700 million, mobile network IPv6 traffic accounted for nearly 50%. The total size of China's data center racks exceeds 6.5 million standard racks, with an average annual growth rate of more than 30% in the past five years.

The global IoT Smart Pressure Sensors market size was estimated at USD 3541.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.30% during the forecast period.
