Abstracts

Ip cameras, or Internet Protocol cameras, are digital video cameras that transmit and receive data over a network or the internet, enabling remote monitoring, recording, and management of surveillance footage through software applications or web interfaces. Unlike analog closed-circuit television (CCTV) systems, IP cameras offer higher resolution, advanced features such as motion detection and analytics, scalability, and easier integration with other security and smart home systems. These cameras can be wired or wireless, indoor or outdoor, and range from consumer-grade models for home use to enterprise-level systems with pan-tilt-zoom (PTZ) capabilities, night vision, and cybersecurity protocols. The core value proposition of IP cameras lies in their ability to provide real-time, accessible, and intelligent surveillance solutions for both personal and commercial applications.

The global Ip Cameras Surveillance market size was estimated at USD 10875.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.45% during the forecast period.
