Report Overview

The IP intercom (non-residential) market refers to internet protocol-based communication systems designed for commercial, industrial, and institutional settings, enabling secure, high-quality audio and video communication between multiple endpoints over an IP network. These systems integrate with existing IT infrastructure, offering advanced features such as access control integration, remote management, and scalability, making them ideal for offices, healthcare facilities, educational institutions, and transportation hubs. Unlike traditional analog intercoms, IP intercoms leverage VoIP technology, supporting HD audio, two-way communication, and seamless integration with security systems like CCTV and door access controls. The shift toward smart buildings, increased security demands, and the need for interoperable communication solutions drive adoption in the non-residential sector, with cloud-based and AI-enabled intercoms emerging as key growth segments.
