Abstracts

The market for IP video door intercoms encompasses security and communication systems that utilize internet protocol (IP) networks to transmit audio and video signals between an outdoor unit (typically a doorbell or gate station equipped with a camera, microphone, and speaker) and one or more indoor monitors or user devices such as smartphones, tablets, or computers. These systems leverage existing internet infrastructure to enable remote access, real-time notifications, two-way communication, and often integrate with broader smart home ecosystems or security setups, offering features like cloud storage, motion detection, night vision, and compatibility with voice assistants. Unlike traditional analog door intercoms, IP-based models provide higher resolution video, scalability, and enhanced functionality by operating over local area networks (LAN) or wide area networks (WAN), making them suitable for residential, commercial, and multi-tenant applications where connectivity, convenience, and advanced security are prioritized.

The global Ip Video Door Intercoms market size was estimated at USD 562.8 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.25% during the forecast period.
