Abstracts

An IPA - free texturing additive is a special adjuvant for silicon wafer texturing, entirely free of alcohols like isopropyl alcohol (IPA). Composed of surface nucleating agents, texture catalysts, and texture corrosion inhibitors in a scientific ratio, it precisely controls the alkaline corrosion reaction on silicon wafers without IPA. This results in a uniform, fine - pyramid - shaped textured surface. It solves issues in traditional texturing, reduces wafer reflectivity, boosts the photoelectric conversion efficiency of solar cells, and is more environmentally friendly.

The global IPA-free Texturing Additive market size was estimated at USD 120.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.10% during the forecast period.
