## Abstracts

An IPFS gateway is a web-based interface that allows users to access IPFS content using a regular web browser. The gateway acts as a bridge between the IPFS network and the traditional web, allowing users to browse and retrieve IPFS content without having to install any specialized software or run a full IPFS node. When a user requests content through an IPFS gateway, the gateway retrieves the content from the IPFS network (through Bitswap and/or kubo) and delivers it to the user's browser using standard web protocols such as HTTP or HTTPS. This allows users to access IPFS content in the same way they would access any other web content, with a simple URL or link. IPFS gateways are a key part of the IPFS ecosystem, as they make IPFS content accessible to a wider audience and help to bridge the gap between the traditional web and the decentralized web.

The global IPFS Gateway market size was estimated at USD 68.2 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.50% during the forecast period.
