Abstracts

iPSC Service (induced pluripotent stem cell service) is a professional service involving the generation, cultivation and application of induced pluripotent stem cells (iPSCs). These cells transform somatic cells (such as skin cells) into pluripotent stem cells through genetic reprogramming technology, which can differentiate into various types of cells and are widely used in disease modeling, drug screening, regenerative medicine and gene therapy research. As the technology matures and its application scope expands, the demand for iPSC services is growing, especially in drug toxicity testing, genetic disease research, and cell replacement therapy. North America and Europe are the main markets, but the Asia-Pacific region, especially China and Japan, is rapidly becoming an important driver of growth, and the global market is expected to continue to grow in the next few years.

The global iPSC Service market size was estimated at USD 118.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.70% during the forecast period.
