Abstracts

IQF shelled edamame refers to mature soybeans that have been harvested, shelled, and frozen using individually quick freezing methods to preserve their freshness, flavor, and texture. These beans are typically used in snacks, salads, or as a side dish.

Plant-Based Protein Demand: Shelled edamame is rich in plant-based protein, making it increasingly popular in vegetarian and vegan diets.

Convenience and Snacking Trends: IQF shelled edamame provides a convenient and healthy snack alternative to other packaged snacks.

Expansion into Global Markets: As global interest in plant-based diets increases, shelled edamame is becoming more popular outside of its traditional Asian markets.

Ready-to-Eat Products: Growing interest in on-the-go, ready-to-eat snacks has increased demand for shelled edamame in snack bars, frozen meals, and pre-packed snacks.

Shelf Life: While IQF edamame has a longer shelf life than fresh varieties, it still requires proper storage and handling to avoid quality loss.

Price Sensitivity: The higher price point compared to other snacks may deter some consumers.

Health and Wellness: As consumers seek healthier, protein-rich alternatives to traditional snacks, shelled edamame is gaining popularity.

The global IQF Shelled Edamame market size was estimated at USD 116.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.40% during the forecast period.
