## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Iridium-Based Catalyst competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A type of catalyst with iridium (Ir) as the active center or main active ingredient. Iridium is a rare precious metal with a unique electronic structure and chemical properties. It can reduce the activation energy of chemical reactions by interacting specifically with reactant molecules, thereby significantly improving the reaction rate, selectivity and efficiency, allowing chemical reactions that were originally difficult to carry out or require harsh conditions to proceed smoothly under relatively mild conditions. Iridium-based catalysts can be homogeneous catalysts, that is, the catalyst and the reactants are in the same phase (usually liquid phase); or they can be heterogeneous catalysts, in which the catalyst exists in solid form and is separated from the reactants.

The global Iridium-Based Catalyst market size was estimated at USD 207.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.70% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Iridium-Based Catalyst market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
