### Report Overview

Nanocrystalline cores have a higher permeability and can withstand larger currents with their smaller size. The nanocrystalline cores have a saturation inductance of 1.25T and a wide operating temperature range, which means they are less susceptible to current imbalance and less susceptible to performance loss at high temperatures. The material has low AC losses, resulting in high efficiency, and supports an optional durable plastic housing that makes the core suitable for coarse wire winding.

The global Iron Based Nanocrystalline Cores market size was estimated at USD 385.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
