Abstracts

Iron core linear motors are a type of electromagnetic direct-drive actuator that feature a slotted iron core within the coil assembly, providing high force density, improved heat dissipation, and enhanced magnetic flux guidance compared to their ironless counterparts. These motors operate by generating a linear force through the interaction between permanent magnets arranged along the track and the energized coils in the movingforcer, making them particularly well-suited for applications requiring high continuous and peak forces, precise positioning, and robust performance in industrial automation, semiconductor manufacturing, packaging machinery, and CNC equipment where rigidity, efficiency, and durability are critical.

The global Iron Core Linear Motors market size was estimated at USD 1200.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
