Abstracts

Iron (III) Hydroxide Polymaltose Complex Preparations are iron - containing medicinal products used for the treatment of iron - deficiency anemia. The main component is a complex of iron (III) hydroxide and polymaltose. The polymaltose molecule surrounds the iron (III) hydroxide, forming a stable complex structure. This complex is designed to improve the solubility and bioavailability of iron in the body. They are available in various forms, such as oral solutions and injections. Oral formulations are commonly used for mild to moderate iron - deficiency anemia, while injectable forms are reserved for cases where oral administration is not possible or when rapid correction of anemia is required, such as in patients with severe malabsorption or those undergoing hemodialysis. Iron is an essential element for the synthesis of hemoglobin in red blood cells. In iron - deficiency anemia, the body lacks sufficient iron to produce an adequate amount of hemoglobin. Iron (III) Hydroxide Polymaltose Complex Preparations release iron in the body, which is then absorbed and used by the bone marrow to increase the production of hemoglobin, thereby improving the oxygen - carrying capacity of the blood and relieving the symptoms of anemia.

The global Iron (III) Hydroxide Polymaltose Complex Preparations market size was estimated at USD 374.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
