## Abstracts

Ironless motor module is a new type of motor module, which has its unique structure and working principle compared to traditional iron core motor modules. The ironless motor module is mainly composed of stator, rotor (rotor), coil, insulation material, commutator, bearings, fan, and heat sink. Among them, the stator is usually composed of rare earth permanent magnet materials (such as neodymium, aluminum nickel cobalt, or samarium cobalt), which have a fixed magnetic field; The rotor is a hollow cylinder made of pure copper wire coils, without an iron core to support the windings. It is usually combined with insulation materials such as epoxy resin to increase structural strength.

The global Ironless Motor Module market size was estimated at USD 479.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.90% during the forecast period.
