Abstracts

Irregular bronze powder is a non-spherical metallic pigment consisting of finely ground bronze alloy particles, typically a copper-zinc or copper-tin composition, characterized by their jagged, non-uniform shapes and flake-like morphology. It is primarily valued for its decorative and functional properties, including metallic luster, corrosion resistance, and electrical conductivity, and finds application across industries such as coatings, printing inks, plastics, textiles, and electronics for aesthetic enhancement, anti-counterfeiting measures, and conductive filler purposes. The irregular particle geometry distinguishes it from spherical bronze powders, offering unique light-scattering effects, improved adhesion in composite materials, and tailored rheological behavior in formulations.

The global Irregular Bronze Powder market size was estimated at USD 185.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
