The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Irreversible Electroporation Device competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The Irreversible Electroporation (IRE) Device is an advanced medical system utilizing high-voltage pulsed electric fields to achieve non-thermal tumor ablation. It delivers controlled, short-duration, high-voltage pulses through multi-channel electrode arrays inserted into target tissues, creating permanent nanoscale pores in cell membranes that disrupt cellular homeostasis and induce apoptosis, enabling precise ablation without thermal damage. The system typically consists of a high-voltage pulse generator, electrode probes, voltage control modules, imaging guidance units, and intraoperative monitoring and control software. Key upstream materials include high-voltage power modules, medical-grade electrodes and leads (titanium or stainless steel), insulation materials, electronic control boards, imaging/navigation components, and industrial computing software; manufacturing requires high-precision electronic assembly, dielectric testing, and sterile medical packaging capabilities. Downstream customers mainly include oncology hospitals, tertiary medical centers, interventional radiology departments, cancer treatment institutes, cardiac electrophysiology centers, and research institutions for tumor ablation, tissue remodeling, and bioelectrical therapy studies. In 2024, global production capacity is estimated at approximately 950 units, with sales of around 820 units, an average selling price of about USD 170,000 per unit, and gross margins ranging between 25% and 40%. The market continues to expand steadily, driven by the adoption of minimally invasive therapeutic concepts, the advancement of image-guided integration, and the improvement in equipment reliability and precision.

The global Irreversible Electroporation Device market size was estimated at USD 139.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
