Abstracts

Iso dry container shipping refers to the transportation of temperature-controlled goods using standard dry freight containers that have been insulated to maintain a stable internal environment, primarily to protect cargo from extreme external temperatures, humidity, or condensation without the use of active refrigeration systems. These containers are commonly used for goods that do not require precise temperature settings but still need protection from thermal shock, such as certain chemicals, pharmaceuticals, electronics, or sensitive non-perishable food items. The insulation helps buffer against rapid temperature fluctuations during transit, making them a cost-effective alternative to reefer containers for shipments where full refrigeration is unnecessary but basic thermal protection is critical.

The global Iso Dry Container Shipping market size was estimated at USD 2624.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
