Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Iso-tridecanol Polyoxyethylene Ether competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Iso-tridecanol Polyoxyethylene Ether is an important nonionic surfactant. It usually exists in the form of colorless transparent or milky white liquid. It has good wettability, permeability and emulsification, and can maintain chemical stability in a wide pH range. The core upstream raw materials are isotridecyl alcohol (usually derived from petroleum cracking products, such as derivatives of propylene trimer or tetramer, obtained through carbonyl synthesis) and ethylene oxide (derived from ethylene). Global sales in 2024 were approximately 280,000 tons, with an average market price of approximately US\$1,700 per ton. The scale of single-line production capacity varies depending on the production process and investment scale of the production equipment, with industry gross profit ranging from 15% to 30%. Global environmental policies and regulations have injected strong momentum into the industry. For example, this product, due to its lack of benzene ring structure and good environmental compatibility, is considered a more environmentally friendly alternative to nonylphenol polyoxyethylene ether (APEO). However, the costs of isotridecyl alcohol and ethylene oxide are significantly affected by fluctuations in the oil and petrochemical markets, directly squeezing the profit margins of midstream manufacturers. They may also face stricter regulations regarding biotoxicity and ecological safety in the future.">The daily chemical industry's pursuit of "mild, efficient, and low-irritant" products, which are less irritating than traditional surfactants, better meet consumers' demand for gentle cleansing and care, driving their increased application share. Global environmental policies and regulations have injected strong momentum into the industry. For example, this product, due to its lack of benzene ring structure and good

environmental compatibility, is considered a more environmentally friendly alternative to nonylphenol polyoxyethylene ether (APEO). However, the costs of isotridecyl alcohol and ethylene oxide are significantly affected by fluctuations in the oil and petrochemical markets, directly squeezing the profit margins of midstream manufacturers. They may also face stricter regulations regarding biotoxicity and ecological safety in the future.

The global Iso-tridecanol Polyoxyethylene Ether market size was estimated at USD 480.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
