Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Isoamyl Phenylacetate competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of Isoamyl Phenylacetate was approximately 1,800 tons, with an average selling price of about US\$39/kg. Single-line capacity was approximately 200 tons/year, with an average gross profit margin of about 25%. Isoamyl Phenylacetate is a synthetic ester flavoring agent, liquid at room temperature, possessing a rich and long-lasting aroma characteristic of honey and cocoa. It is widely used in food flavorings and cosmetic fragrances, playing a crucial role as a fixative, extending the overall fragrance's persistence. Upstream raw materials mainly include basic chemical raw materials such as phenylacetic acid and isoamyl alcohol. Downstream applications are entirely concentrated in the fragrance and flavor industry, where it is a key ingredient in formulating food flavorings (such as honey, chocolate, and candy flavors) and cosmetic fragrances (used in perfumes, skincare products, and personal care products), and its low volatility allows it to function as a fixative to prolong the aroma.

The global Isoamyl Phenylacetate market size was estimated at USD 70.2 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
