Abstracts

Isobornyl acrylate (IBOA) is a monofunctional acrylate monomer derived from the reaction of isoborneol with acrylic acid, characterized by its rigid bicyclic structure, low volatility, high glass transition temperature (T_g), and excellent chemical resistance, making it a versatile chemical intermediate widely used in UV-curable coatings, inks, adhesives, and sealants to enhance hardness, scratch resistance, adhesion, and weatherability of final products. The global IBOA market is primarily driven by increasing demand from end-use industries such as automotive, packaging, electronics, and construction, where there is a growing preference for environmentally friendly, high-performance, and energy-efficient UV-curable systems over traditional solvent-based alternatives. Key market trends include technological advancements in production processes to improve purity and reduce costs, rising investments in research and development to expand application scope, and stringent environmental regulations promoting the adoption of low-VOC (volatile organic compound) materials.

Geographically, Asia-Pacific dominates the market due to rapid industrialization, expanding manufacturing capacities, and strong growth in automotive and electronics sectors, particularly in China, Japan, and South Korea, while North America and Europe also hold significant shares, supported by well-established industrial bases and strict regulatory frameworks favoring sustainable products. Major players in the market are focusing on strategic collaborations, capacity expansions, and product innovations to strengthen their market position and cater to the evolving needs of diverse applications.

The global Isobornyl Acrylate (Iboa) market size was estimated at USD 220.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
