Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Isobutene competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Isobutene, also known as isobutylene, is a branched-chain olefin with the chemical formula C_4H_8 . It is a colorless gas with a faint petroleum-like odor and is one of the major isomers of butene. Isobutene is produced through catalytic or thermal cracking of hydrocarbons and is primarily used as an intermediate in the chemical industry. Its key applications include the production of butyl rubber, methyl tert-butyl ether (MTBE), and polyisobutylene, as well as in the synthesis of other specialty chemicals and fuel additives. The isobutene market is an integral part of the global petrochemical and performance materials industry. Its demand is closely linked to downstream applications such as automotive, packaging, adhesives, and fuel blending. One of the most significant uses of isobutene is in the production of butyl rubber, which is vital for tire manufacturing due to its excellent impermeability and flexibility. Another major outlet is MTBE, a high-octane fuel additive, though environmental regulations have reduced its use in some regions. With the growing demand for high-performance materials, polyisobutylene derived from isobutene is also gaining traction, especially in lubricants, sealants, and medical-grade elastomers. Furthermore, emerging bio-based production technologies are being explored to reduce reliance on fossil fuel-derived isobutene, aligning with global sustainability goals. Technological advancements, shifting environmental policies, and regional differences in fuel regulations will continue to shape the competitive dynamics and investment strategies in the isobutene market.

The global Isobutene market size was estimated at USD 3942.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the

forecast period.
