Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Isobutylene-Based Thermoplastic Elastomer competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Isobutenyl-based thermoplastic elastomer is a fully saturated styrene-isobutene block (SIBS) copolymer. It is a unique material that combines the properties of plastic and rubber. SIBS consists of three fragments: a styrene intermediate block sandwiched between two isobutylene blocks. Styrene intermediate blocks provide rigidity and strength, while isobutene blocks provide flexibility and elastic properties. SIBS polymers are known for their excellent transparency, low gas permeability, good mechanical properties and biocompatibility.

The global Isobutylene-Based Thermoplastic Elastomer market size was estimated at USD 235.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
