Isoflavones are a type of naturally occurring plant compound that belongs to the flavonoid family. They are commonly found in soybeans and other legumes, and are known for their potential health benefits, particularly in managing menopausal symptoms and reducing the risk of certain chronic diseases. Isoflavones have gained popularity as dietary supplements and functional food ingredients due to their estrogen-like properties and antioxidant effects. The market for isoflavones is primarily driven by increasing consumer awareness of the health benefits associated with these compounds, as well as growing demand for natural and plant-based ingredients in the food and beverage industry.
