## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Isohexadecane competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Isohexadecane (CAS: 4390-04-9) is a hydrocarbon compound that is commonly used in cosmetics and personal care products as an emollient, solvent, and texture enhancer. It is a clear, odorless liquid that is insoluble in water and has a very low potential for skin irritation. Isohexadecane is a branched-chain isomer of hexadecane, which is a straight-chain hydrocarbon that is found in petroleum. It is produced by hydrogenating a mixture of isomeric C16 olefins, resulting in a mixture of branched and linear isomers. The resulting product is then purified and fractionated to obtain the desired isomer composition. In cosmetics and personal care products, isohexadecane is commonly used in moisturizers, facial cleansers, and anti-aging products to improve the texture and spreadability of the product. It is also used as a solvent in some makeup and sunscreen formulations to dissolve other ingredients. Isohexadecane is considered safe for use in cosmetic products when used as directed, and it has a low risk of skin irritation or sensitization. It is important to note that while isohexadecane is generally safe, some people may be sensitive to certain ingredients and may experience an adverse reaction. The Isohexadecane market is driven by its extensive use in the cosmetics, personal care, and pharmaceutical industries, where it serves as a high-performance emollient and solvent. Known for its lightweight, non-greasy feel and excellent spreadability, isohexadecane is commonly incorporated into products such as foundations, sunscreens, moisturizers, and makeup removers. Its compatibility with a wide range of active ingredients and its role in enhancing product texture and sensory experience have increased its adoption, especially in premium skincare and dermatological formulations. Market growth is also

influenced by consumer demand for non-comedogenic and hypoallergenic formulations, alongside regulatory shifts favoring safer, more stable hydrocarbon ingredients. Additionally, the rise of clean beauty trends and ongoing R&D in formulation science continue to support the global expansion of isohexadecane-based applications.

The global Isohexadecane market size was estimated at USD 392.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
