Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Isoindolinone Pigments competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Isoindolinone pigments are a class of high-performance organic pigments (HPPs) characterized by an isoindolinone skeleton. Typical examples include C.I. Pigment Yellow 110 (PY110), PY109, and PY139. They share excellent lightfastness, weathering resistance, and heat resistance, making them suitable for demanding coatings, plastics, and ink systems. They are commonly used in automotive topcoats/refinishes, industrial protective coatings, engineering plastics, and high-end inks. In 2024, global isoindolinone pigment production reached 8,148 tons, with an average selling price of US\$49.84 per kilogram. Global production in 2024 was approximately 10,300 tons. The main upstream raw materials for isoindolinone pigments include phthalonitrile, aromatic amines, acyl chlorides, and solvent additives. Major raw material suppliers include BASF, LANXESS, Trust Chem, CINIC, and Longsheng Group. Downstream customers are concentrated in the automotive coatings, industrial protective coatings, engineering plastics, packaging inks, and artistic coatings sectors. End users include global leading companies such as PPG, AkzoNobel, BASF Coatings, Sun Chemical, and Toyo Ink. This type of pigment, represented by Pigment Yellow 110, PY109, and PY139, holds a stable share of the global high-performance organic pigment market thanks to its high weather and heat resistance. Isoindolinone pigments are a class of high-performance organic yellow pigments (HPP) characterized by excellent lightfastness, weather resistance, and heat stability. Representative color indices include C.I. Pigment Yellow 110, 109, and 139, widely used in automotive coatings, industrial protective paints, engineering plastics, packaging inks, and artists' paints. Driven by the rise of lightweight vehicles, eco-

friendly coatings, and advanced polymer applications, the demand for high-performance organic pigments continues to grow globally. Overall, Isoindolinone pigments are evolving from niche high-end coatings toward broader applications in engineering plastics and eco-friendly inks, benefiting from the global transition away from heavy-metal-based inorganic pigments such as lead chromates and cadmium yellows. The market outlook remains positive and resilient.

The global Isoindolinone Pigments market size was estimated at USD 406.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.90% during the forecast period.
