### Report Overview

-isolated DC-DC converter.

Non-isolated DC-DC converters are common and of lower cost, they are used in most negative ground application in vehicles for various DC powered appliances and equipment. However they have one big disadvantage in the electrical connection between the input and output which offers little or no protection to the load for any high electrical voltage, current and etc. occurs on the input side. They also have less noise filtering blockage.

Isolated DC-DC converters have high isolation (barrier) voltage from several hundreds to thousand volts depending on the type of standard. They can be used as negative grounded or positive ground or floating ground for various equipment from data com to telecom. They have strong noise and interference blocking capability thus provide the load with a cleaner DC source which is required by many sensitive load.

The major players in global Isolated DC-DC Converter market include Vicor, Infineon, Artesyn, etc. The top 3 players occupy about 15% shares of the global market. North America and Europe are main markets, they occupy about 50% of the global market. Flyback is the main type, with a share about 60%. Industrial & Automation and Consumer Electronics are main applications, which hold a share about 70%.
