Report Overview

Isooctanoic Acid(25103-52-0) is a type of fatty acid with nine carbon atoms. It is also called pelargonic acid. Its chemical formula is $C_9H_{18}O_2$. Isononanoic acid is obtained by oxidation of isononyl aldehyde. The acid is a mixture of isomers with 3, 5, 5-trimethyl hexanoic acid with weight percentage of about 90. Isononanoic acid is a clear, colorless liquid with faint odor. It is miscible with organic solvents. Isononanoic acid is only sparingly soluble in water. The ECHA (European Chemicals Agency) classifies isononanoic acid as a dangerous material in CPA classifications, as it causes severe eye damage if exposed and causes skin irritation if swallowed. Isononanoic acid is primarily applied as a plasticizer in cosmetics and personal care products. It is used as a skin conditioning agent, cleansing agent, and emulsifying agent in surfactant formulations. It is also used as a herbicide to prevent growth of weeds, both indoors and outdoors, and as a blossom thinner for apple and pear trees. The Food & Drug Administration (FDA) has approved the usage of isononanoic acid as a food additive and has added it to the list of synthetic flavoring. With this, it can now be added directly to food.
