## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Isophthalic Unsaturated Polyester Resin competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of isophthalic unsaturated polyester resin will reach 1.52 million tons, with an average selling price of US\$2100 per ton. Isophthalic unsaturated polyester resins are linear polyester prepolymers made from isophthalic acid (IPA) or its anhydrides as the primary acidic raw material, co-condensed with polyols, and then reacted with unsaturated acids. These prepolymers are then dissolved in reactive monomers such as styrene to form a cross-linked resin system. Compared to common orthophthalic unsaturated polyester resins, isophthalic unsaturated polyester resins have a more regular molecular structure, greater polarity, and greater chemical resistance. Consequently, they offer superior hydrolysis resistance, corrosion resistance, heat resistance, and mechanical strength, making them suitable for applications requiring higher performance. The synthesis of isophthalic unsaturated polyester resins relies on high-purity upstream key raw materials, including phthalic anhydride, isophthalic acid, and maleic anhydride. These raw materials are primarily supplied by large international chemical companies such as Lanxess, Stepan, Huntsman, and Mitsubishi Chemical, ensuring stable and scalable resin production. These resins have a wide range of downstream applications, particularly in the composites sector. In the wind power industry, they are used to manufacture structural composite materials for wind turbine blades (representative companies include GE, TPI Composites, Vestas, and Siemens). In the pipeline industry, they are used to manufacture high-performance pipe composites (representative companies include Amiblu and Future Pipe), providing excellent mechanical strength, corrosion resistance, and long-term reliability.

The global Isophthalic Unsaturated Polyester Resin market size was estimated at USD 3186.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
